Abstracts

Inflammatory bowel disease (IBD) is a chronic inflammatory bowel disease of unknown etiology, mainly including ulcerative colitis (UC) and crohn's disease (CD).The etiology may include environmental, infectious, immune and genetic factors.Because the etiology of inflammatory bowel disease is not clear, clinical symptoms are not specific, easy to be confused with other diseases, so the diagnosis is more difficult.Once misdiagnosis is caused by mistreatment, the result is mild but not cured, serious is life-threatening.The diagnosis of inflammatory bowel disease mainly includes the collection of clinical history, colonoscopy, imaging and mucosal histology.
