## Abstracts

Injection molding machines perform the injection molding process, which is generally used to manufacture plastic parts; however, they can also be employed to manufacture products or parts made of various other materials apart from plastic. The injection molding process can be employed to manufacture a wide variety of parts or products, which might vary greatly in their structures, dimensions, and end-use applications. The injection molding machine melts the material to be injected into the shaping mold, where the molten material cools off and solidifies, taking the shape of the desired component.
