Abstracts

Inkjet printing is a type of computer printing that recreates a digital image by propelling droplets of ink onto paper, plastic, or other substrates. Inkjet printers are the most commonly used type of printer, and range from small inexpensive consumer models to expensive professional machines.

The concept of inkjet printing originated in the 20th century, and the technology was first extensively developed in the early 1950s. Starting in the late 1970s inkjet printers that could reproduce digital images generated by computers were developed.

The emerging ink jet material deposition market also uses inkjet technologies, typically printheads using piezoelectric crystals, to deposit materials directly on substrates.

The technology has been extended and the ?ink? can now also comprise living cells, for creating biosensors and for tissue engineering.

Inkjet Marking Coding Machines is usually used for marking and coding of products and packages. In this report, we only discuss about the Marking & Coding machines which uses inkjet technology.
