Abstracts

According to the source of the feed mycotoxin binder and modifier market, inorganic sources have a larger market share in 2018. Feed mycotoxins binders come mainly from inorganic sources such as aluminum, sodium, potassium and calcium silicates. In the feed industry, clay products include bentonite, zeolite, montmorillonite, and HSCAS (sodium calcium aluminosilicate hydrate), activated carbon, and synthetic polymers for binding aflatoxins. These products have many advantages over organic modifiers, such as lower prices and ease of storage and handling, which has led to an increased preference for these products over organic mycotoxins.
