Abstracts

As for March, 26 2020:

Dr. Eleanor Fish (a prominent immunologist at the University of Toronto, Canada) comments that she does not think BCG may completely eliminate infection caused by a novel coronavirus, but it is likely to mitigate the effects of a novel coronavirus on individuals. The scientists involved in the study hope that BCG vaccination may ease the burden on the health system before a specific vaccine for Covid-19 is available.

1.BCG Clinical Trials for Against Covid-19

Researchers in four countries (the Netherlands, Australia, Germany, and the United Kingdom) will soon begin clinical trials of new coronaviruses using unconventional methods. They will test whether a century-old anti-tuberculosis (TB) vaccine (BCG) can broadly improve the body's immune system, making it better able to fight sars-cov-2 and possibly prevent infection altogether. The study will be administered to people at high risk, including physicians and nurses, and to older adults.

A team at the university of Melbourne in Australia is using exactly the same protocol to carry out the BCG study among healthcare workers. Another team at the university of Exeter in the UK will conduct a similar study on older people. Last week, a team at the Max Planck Institute for Infection Biology in Germany announced that, inspired by Netea's work, they would carry out similar clinical trials in older people and healthcare workers with another anti-tb vaccine in development, VPM1002, a genetically modified BCG vaccine. 'The elderly and health care workers are bearing the brunt of the current outbreak, so they would particularly benefit if the VPM1002 vaccine could help.' They said.

2.Introduction of BCG

The BCG vaccine consists of an attenuated (weakened) version of a relative of *Mycobacterium tuberculosis*, the causative agent of TB. The vaccine is in most countries in the world of children after the birth of the first annual vaccination is used, the BCG vaccine to be both safe and cheap, it can prevent an average of about 60% of TB cases, children vary widely between countries. Vaccines typically produce an immune response against the target pathogen, such as antibodies that bind and neutralize one virus but do not bind to others. But BCG may also enhance the immune system's ability to fight pathogens other than tuberculosis, according to decades of published clinical and observational studies. The researchers concluded that in the first year after vaccination, about 30 percent of all known pathogens, including viruses, could be prevented. A 2014 review by the world health organization concluded that BCG appeared to reduce overall child mortality.

3.BCG can 'Train' Innate Immunity

The innate immune system, composed of white blood cells such as macrophages, natural killer cells and neutrophils, should not have this memory. The team, led by professor Netea, found that BCG could survive for months in human skin, stimulating not only the t-cells and b-cells of mycobacterium memoriae, but also the white blood cells responsible for innate immunity, which can quickly respond to new infections. In a randomized placebo-controlled study published in 2018, the team showed that BCG vaccination prevented the yellow fever virus from being experimentally infected.

This report contains market size and forecasts of BCG Vaccine for Prevent Covid-19 in global, including the following market information:

Global BCG Vaccine for Prevent Covid-19 Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global BCG Vaccine for Prevent Covid-19 Market Sales, 2017-2022, 2023-2028, (K Doses)

Global top five BCG Vaccine for Prevent Covid-19 companies in 2021 (%)

The global BCG Vaccine for Prevent Covid-19 market was valued at million in 2021 and is projected to reach US\$ million by 2028, at a CAGR of % during the forecast period.

The U.S. Market is Estimated at \$ Million in 2021, While China is Forecast to Reach \$ Million by 2028.

by Dosage Segment to Reach \$ Million by 2028, with a % CAGR in next six years.

The global key manufacturers of BCG Vaccine for Prevent Covid-19 include Merck, Sanofi Pasteur, Japan BCG Lab, China National Biotec, InterVax, Serum Institute of India, GreenSignal, Statens Serum Institute and Shanyao Group and etc. In 2021, the global top five players have a share approximately % in terms of revenue.

MARKET MONITOR GLOBAL, INC (MMG) has surveyed the BCG Vaccine for Prevent Covid-19 manufacturers, suppliers, distributors and industry experts on this industry, involving the sales, revenue, demand, price change, product type, recent development and plan, industry trends, drivers, challenges, obstacles, and potential risks.

1 INTRODUCTION TO RESEARCH & ANALYSIS REPORTS

- 1.1 Insulin Glargine and Lispro Market Definition
- 1.2 Market Segments
 - 1.2.1 Market by Type
 - 1.2.2 Market by Application
- 1.3 Global Insulin Glargine and Lispro Market Overview
- 1.4 Features & Benefits of This Report
- 1.5 Methodology & Sources of Information
 - 1.5.1 Research Methodology
 - 1.5.2 Research Process
 - 1.5.3 Base Year
 - 1.5.4 Report Assumptions & Caveats

2 GLOBAL INSULIN GLARGINE AND LISPRO OVERALL MARKET SIZE

- 2.1 Global Insulin Glargine and Lispro Market Size: 2021 VS 2028
- 2.2 Global Insulin Glargine and Lispro Revenue, Prospects & Forecasts: 2017-2028
- 2.3 Global Insulin Glargine and Lispro Sales: 2017-2028

3 COMPANY LANDSCAPE

- 3.1 Top Insulin Glargine and Lispro Players in Global Market
- 3.2 Top Global Insulin Glargine and Lispro Companies Ranked by Revenue
- 3.3 Global Insulin Glargine and Lispro Revenue by Companies
- 3.4 Global Insulin Glargine and Lispro Sales by Companies
- 3.5 Global Insulin Glargine and Lispro Price by Manufacturer (2017-2022)
- 3.6 Top 3 and Top 5 Insulin Glargine and Lispro Companies in Global Market, by Revenue in 2021
- 3.7 Global Manufacturers Insulin Glargine and Lispro Product Type
- 3.8 Tier 1, Tier 2 and Tier 3 Insulin Glargine and Lispro Players in Global Market
