Abstracts

Diabetes is a clinical condition where the inability of the pancreas to produce insulin causes the decreased glucose levels in the body. The rapidly changing lifestyle and rising consumption of alcohol and smoking, are contributing to the prevalence of diabetes, worldwide. Moreover, the rise in obese population is another factor contributing to the high prevalence of diabetes. Type 1 diabetes (T1D) requires continuous monitoring of blood glucose coupled with multiple injection of insulin, thereby increasing the scope for growth of pumps and other insulin delivery devices and glucose monitors. Insulin pump can deliver insulin either manually or automatically. These pumps can be programmed to deliver specific set of doses as well as larger sets of doses whenever required, such as before meals. Patients can connect these devices to their smart phones to calibrate blood glucose reading. Insulin pumps accessories can be segmented into insulin reservoir/cartridges, insertion devices set, and batteries.
