Abstracts

Interdental cleaning is the process of the removal of dental plaque or food particles from the space located between the teeth. Carrying out interdental cleaning is necessary because such devices perform cleaning function in areas that are not reachable or can be cleaned by a toothbrush. There are various type of interdental cleaning devices available and some of those are interdental brush, dental floss and tooth picks. It is important to know that a significant portion of the teeth surfaces are beneath the gum line and between the teeth.
