Abstracts

Internet of Things comprises systems and software, medical devices, and services. It has had a significant impact on the overall health care sector and has been beneficial in remote clinical monitoring, chronic disease management, preventive care, assisted living, and personal fitness monitoring. The Internet of Things has transformed the health care sector by lowering costs, improving efficiency, and bringing the focus back to quality patient care. The demand for Internet of Things for diabetes is increasing with growing prevalence of diabetes, rising health concern, ease of use, technological advancements such as mobile devices and apps, and increasing adoption of smartphones and Internet services. The Internet of Things for diabetes allows individuals to track and monitor diabetes by their own, reduces doctor/physician visits, and provides results on the mobile devices immediately.
