Abstracts

An Internet service provider (ISP) is also known as an Internet access provider (IAP). ISP management systems enable Internet service providers (ISPs) to centrally and smoothly manage end-to-end processes or the process of their Internet business. ISP management systems provide complete authentication, authorization, and accounting (AAA) as well as operations and billing management modules including OSS and BSS. These systems support flexible deployment options such as on-premise deployment and cloud-hosting on a SaaS model deployment. ISP management systems are developed or designed for managing the web server, sites, and payments and services related to Internet. ISP management systems are used for managing all Internet operations, which can occur during the lifecycle of an Internet business, such as radius – authentication, authorization, and accounting (AAA) management, plan management, subscriber management, billing management, partner management, and compliance management. ISP management systems also offer real-time status of data usage, renewal reminders, and network issue notifications to users.
