Abstracts

Intra-Aortic Balloon Pump, or IABP for short, is a mechanically assisted circulatory device that is currently widely used in clinical practice. A catheter with a balloon is implanted in the arterial system to the distal end of the left subclavian artery opening in the descending aorta. The filling, expansion and emptying corresponding to the cardiac cycle can cause the blood to undergo phasic changes in the aorta, thereby playing the role of mechanically assisting the circulation of a cardiac catheter treatment method. It can reduce aortic impedance, increase aortic diastolic pressure, reduce myocardial oxygen consumption, increase oxygen supply, and achieve the purpose of improving heart function.
