IoT edge platforms help facilitate localized computer processing on IoT devices. These devices constantly analyze streams of data including information about networks, actions, and anything else the device is connected to or interacting with. IoT edge platforms provide containerized modules to deploy on IoT devices, a runtime to execute actions locally, and a cloud-based interface for monitoring and management.

Companies use these technologies to reduce bandwidth usage for IoT devices, respond quicker to malfunction, and reduce overall network traffic. Shifting IoT analytics to the edge can also increase security by reducing the amount of data being transferred over networks.
