Abstracts

A fleet management system is formed by the integration of hardware, software, and communication technologies. It provides a platform to fleet operators to efficiently control, track, and monitor commercial vehicles. They improve the overall operational efficiency by reducing the non-value-added activities of the operators. Fuel cards are used for fuel management while driver safety systems monitor driver behavior. Other solutions are employed for locational tracking of vehicles, driver navigation assistance, and ensuring that the operators meet the regulatory standards set by their respective national governments.
