IoT machine vision software is the field of artificial intelligence that deals with the intelligent processing of visual information. The human eye takes in light which is received by photoreceptors, known as cones and rods, that sends signals to neurons which lead up to the brain. The brain then processes these signals to interpret what is being seen. A computer acts very similar. Electronic photoreceptors within a camera, known as pixels, take in light and send electrical signals to a microprocessor. IoT machine vision software then interprets what is seen.
