Abstracts

The IoT RFID reader is a device that reads out the information in the tag, or writes the information that the tag needs to store into the tag. Depending on the structure and technology used, the RFID reader can be a read/write device, and the information control and processing center of the RFID system. When the RFID system works, the radio frequency identification reader transmits radio frequency energy in an area to form an electromagnetic field, and the size of the area depends on the transmission power. The tags in the coverage area of the reader are triggered, send the data stored in it, or modify the data stored in it according to the instruction of the reader, and can communicate with the computer network through the interface.
