Abstracts

IoT smart pressure sensors are used in a variety of industrial applications and fields and are also known as pressure transducers or transmitters, depending on the signal they produce. They work by measuring pressure through a flexible component, then converting the amount of flex into an electrical signal that can be quantified. Pressure measurement devices are designed to function based on a system's size and complexity, and reflect the different forms of pressure readings that can be collected, including absolute, gauge, and differential pressure.
