Abstracts

IoT Ultrasonic proximity sensors are commonly used in automated production and are good for dark, light, or transparent materials, including transparent glass from a distance, fluid level, and paper and wood stacks. They're also good for sound muffling materials. These sensors use sound waves pulsed from a transducer, and are available in the same through-beam, retro-reflective, and diffuse setups as photoelectric sensors. Ultrasonic sensors can be affected by unusual textures, which can distort the sound.
