## Abstracts

Isothermal liquid nitrogen freezers are built with patented jacket technology designed to provide with superior sample integrity. LN<sub>2</sub> is stored in the jacketed space that surrounds the chamber, so the storage area is completely dry and has industry-leading temperature uniformity. The great advantage of this type of LN<sub>2</sub> freezers is the fact that samples are stored at liquid nitrogen temperatures without liquid nitrogen contact. These freezers have a double wall which contains the liquid nitrogen. The nitrogen vapour is then continuously circulated inside the tank through little holes at the top, guaranteeing a superb temperature uniformity of around -190°C throughout the inner tank.
