Log management software help enterprises to improve security and regulatory compliance. Every computing device in an organization generates hundreds of gigabytes of logs per day. This huge set of event logs is monitored by the log management platform to identify security breaches and maintain continuous security within organizations. The platform protects networks, endpoints, and devices from various malicious attacks, sophisticated cybercriminals, ransomwares, and Advanced Persistent Threats (APTs). With the implementation of log management platforms, public and private organizations can prevent security threats, cut down business costs, and enhance the information security infrastructure. Therefore, enterprises are deploying advanced log management solutions and services to secure networks and endpoints from cyber threats.
