Abstracts

IT vendor risk management (VRM) is the process of ensuring that the use of external IT service providers and other IT vendors (third parties) does not create unacceptable potential for business disruption or have a negative impact on business performance. IT VRM solutions support enterprises that have to assess, monitor and manage their exposure to risks arising from their use of third parties that provide IT products and services or that have access to their information. Some solutions' capabilities extend to fourth parties and subcontractors — a feature increasingly important to customers.
