Abstracts

The Jet board was an early powered longboard surfboard. It is one of the earliest, if not the earliest motorized surfboard, produced from 1965 to 1968. The original designer was a former engineer from Boeing Aircraft. It was designed to use an aircraft trim tab roller control with your foot for acceleration. There was a simple ingenious safety OFF switch, using a magnet that connected two electrical terminals across a point, located close by the engine's surface watertight hatch. The rider would attach a strap to his ankle with a flexible wire line to the magnet. When he fell off, it would stop the engine.

This report contains market size and forecasts of Jet Boards in global, including the following market information:
