Abstracts

The Jet Tube Electro-hydraulic Servo Valve is a high performance force feedback two-stage directional and flow control valve. It accepts tiny electrical signals and converts them into hydraulic power amplification. The output flow rate is proportional to the size of the control electrical signal. The jet electro-hydraulic servo valve adopts a jet pre-stage, which has strong anti-pollution ability, high reliability, small size and weight, and can be widely used. It is used in military aircraft, civil airliner, steam turbine, nuclear power and other fields.
