## Abstracts

The jewelry laser marking machine can complete the marking and engraving of the desired characters in seconds, giving jewelry the unique beauty of custom engraving. Laser marking adopts a non-contact marking process, which uses a high-energy-density laser beam to partially irradiate the surface of the material to vaporize the surface material or produce a chemical reaction of discoloration, thereby leaving lasting marks. The entire engraving process has no direct contact with the jewelry, no mechanical friction, and no damage to the jewelry. In addition, the laser spot is small, the thermal shock is also small, and the marked characters are exquisite and no damage to the jewelry.
