Kidney cancer -- also called renal cancer -- is a disease in which kidney cells become malignant (cancerous) and grow out of control, forming a tumor. Almost all kidney cancers first appear in the lining of tiny tubes (tubules) in the kidney. This type of kidney cancer is called renal cell carcinoma.

Renal cell carcinoma (RCC) is a common malignant tumor worldwide, referred to as kidney cancer. According to the World Health Organization, the global incidence of kidney cancer accounts for 2% to 3% of systemic tumors. Among malignant tumors of the urinary system, its incidence is second only to bladder cancer, and it is increasing year by year.
