Laboratory Information System

LIS is patient based. It stores and manages patients' data and their test results. A LIS system includes patient-centric features such as:

Tracking, storing and managing a patient's demographics and associated sample information

Managing clinical tests performed on samples and their outcomes

Generating compliant patient reports

LIMS, on the other hand, is a comprehensive software tool used for centralizing laboratory's operational workflows and is sample centric rather than patient centric. The data it processes or analyzes includes large batches of complex sample data from drug trials*, biological testing, water treatment facilities etc. Some of the laboratory workflows that a LIMS manages are:

Sample Management: Sample accessioning, storage, chain of custody, test and result management, report generation, and disposal

Subject Management: Patient data entry, data masking, maintaining demographic details and report generation

Test Management: Test registration, result entry and report

Study Management: Projects and research data management

Billing Management: Client profiling and billing

Request Management: Request handling, approval and processing

User Management: User profiles, role based user access rights and data security

Lab Inventory: Stock management of chemicals, reagents, and consumables

Instrument Management: Instrument calibration, Installation Qualification (IQ), Operational Qualification (OQ), and Performance Qualification (PQ)

Kits Management: Multiple operating centers, kit preparation, shipping and tracking

Storage Management: Freezer quality control, location management and tracking

Audit Trail: Record of the series of activities performed on a sample
