Abstracts

Lactose intolerance is a gastrointestinal condition developed in patients with a low activity level of the lactase enzyme. Lactase is responsible for breakdown of lactose, a type of sugar found in all dairy products. Symptoms of lactose intolerance are at times very painful and even embarrassing due to flatulence. Symptoms are usually seen only after consumption of dairy products. They include abdominal pain, flatulence, bloating, cramps, and diarrhea. In a study on lactose intolerance conducted by Engage Health in 2008, 82% of patients reported that symptoms of lactose intolerance affect their daily social routine.
