## Abstracts

Lambda cyhalothrin is a class of pyrethroid insecticide chemical with a broad range of applications and repellent characteristic properties. Pyrethroid chemicals are synthetic chemical equivalents of pyrethrins, which are naturally occurring compounds found in flowers of Chrysanthemums plants. Commercially, lambda cyhalothrin is employed on nonfood crops, food crops, hospitals, ear tags of cattle, and termite treatments. It is majorly produced in India, the U.S., Germany, and China due to presence of numerous industries. Being one of the most important chemicals of the pyrethroid family, lambda cyhalothrin is broadly used in agricultural products such as fruit trees, cotton, and vegetables for pest and insect control. It is highly efficient and relatively less toxic, thus finds wide range of applications.
