Digoxin is a cardiac glycoside extracted from the leaves of the foxglove plant *Digitalis lanata*. Although the properties of digitalis extracts have been known since the dark ages, their cardiac effects were discovered by the Scottish doctor William Withering in 1776. According to the history, during the treatment of one of his patients, who had a severe heart condition to which no treatment was available at that time. As a last resource, the patient went to a local gypsy, who gave him a secret plant extract, which improved his condition considerably.
