Abstracts

The laser focusing mirror is a professional lens system whose purpose is to form a uniform focused spot of the laser beam in the entire marking plane. It is one of the most important accessories of the laser marking machine. In the case of no deformation, the position of the focus point depends on the focal length of the lens and the tangent of the deflection angle, and the position of the focus point only depends on the focal length and deflection angle, which simplifies the calculation method of focus positioning.
