## Abstracts

Laser stealth cutting equipment focuses the laser on the inside of the workpiece to form a modified layer in the workpiece, and then uses a belt expander to separate the bare pieces. It changes the interior of the workpiece, so it can inhibit cutting waste. Therefore, it is suitable for easily contaminated workpieces. It is a dry process without cleaning, so it is suitable for processes vulnerable to load. Since the width of the cut can be narrowed, it greatly helps to reduce the number of streets. It is used in laser stealth cutting of silicon wafer for MEMS, RFID and other products. Its advanced intelligent system ensures the quality and efficiency of product cutting.
