## Abstracts

Latex allergy is caused by exposure to substances made of latex (natural rubber). The exposure leads to a person's immune system reaction to harmless protein in such a way as if the proteins are antigens, or disease causing. Antibodies and antihistamines get released in the body as result so as to react to the natural harmless proteins which may cause symptoms such as itchy hands, skin rash, hives, and eczema (cracking of skin). It is commonly caused in people who are exposed to latex based products frequently.
