Abstracts

Latex is a natural material extracted from flowering plants. It can also be artificially manufactured by polymerizing monomer such as styrene, which is emulsified by surfactants. It is utilized to manufacture latex gloves for surgical and physical examination purposes. Latex gloves are widely used in healthcare practices and it is a popular choice among medical professionals. Latex gloves are biodegradable and provide high level of touch sensitivity and high elasticity. They also provide high dexterity and can work effectively to contain situations involving high infections.

Increase in awareness in healthcare providers and patients regarding healthy and safety measures and to inhibit infections through clinical or physical examinations drive the market. Moreover, rise in number of surgeries and infections is expected to boost the growth of this market. However, slight increase in latex-related allergies impede the market growth.
