## Abstracts

LCP material is a new type of thermoplastic organic material with high temperature resistance, high strength mechanical properties, excellent electrical properties and processing properties, and is widely used in the field of electronics. In addition, LCP will become the preferred material for 5G antennas due to its dielectric stability and high mobility. Compared with other organic polymer materials, LCP has excellent vibration absorption properties, low dielectric properties, self-reinforcing effects, good chemical resistance and heat resistance, low melt viscosity, low linear expansion coefficient and other excellent properties, which will be suitable for 5G antenna materials, and it will also be widely used in various fields.
