Abstracts

Lead acid batteries are rechargeable batteries consisting of lead plates with a sulfuric acid/water electrolyte solution. One of the singular advantages of lead acid batteries is that they are the most commonly used form of battery for most rechargeable battery applications (for example, in starting car engines), and therefore have a well-established established, mature technology base.

From January to December 2020, the global lead-acid battery sales volume was approximately 589287 million VAh, an increase of 1.13% year-on-year. In the global market, both lead-acid batteries and lithium-ion batteries occupy a dominant position in secondary batteries. It is expected that the overall market demand will continue to grow.
