These names actually include all light weight slow flying aircraft. They come in all shapes and sizes and include powered parachutes, powered paragliders, balloons, basic helicopters, hang glider style wings as well as the more traditional looking lightweight planes. It is all the more confusing in that the names and classifications vary in different countries. This is also the case for safety regulations which are very strict in the UK, Germany and Italy yet almost non existent in France and the US which requires no training or license for some of the classes.
