A steering knuckle assembly that is made of a lightweight material, such as an aluminum-based material, but is strong enough to withstand various induced stresses like those caused during a press-fit installation of a wheel bearing assembly. In one embodiment, the steering knuckle assembly includes a steering knuckle component made of an aluminum-based material that is over-molded or cast around a reinforcing insert made of a stronger ferrous-based material. The reinforcing insert has an inner surface surrounding an opening that is designed to receive a wheel bearing assembly, where the inner surface can be machined before or after the over-molding or casting process.
