## Abstracts

Lignin is the main by-product of paper pulping processes and is typically burned as fuel. Being the natural glue in plants and having a phenolic nature makes lignins an attractive replacement for wood adhesives. As the intolerance towards the non-bio-degradable materials has increased due to a negative impact on the environment, the demand for eco-friendly solutions is inclining. Various chemical companies across the globe are continuously making efforts on developing lignin for adhesives eliminates the requirement of petroleum for the production of adhesives, and thus reduces the risk of high fluctuation in the price of the lignin for adhesives associated with the price of petroleum.
