Abstracts

Linear Motor-driven Transfer Systems are transfer system which derived by linear motors. This system can be used wherever products have to be transported particularly quickly and precisely. This report studies the Linear Motor-driven Transfer Systems market. When assembly processes call for the interlinking of complex processes, Linear Motor-driven Transfer Systems are used for the assembly, testing and inspection of components, and in particular when a deep vertical range of manufacture is required. These systems can also be interlinked with rotary indexing systems to accommodate complex tasks.

The various processing stations are arranged in series to form a chain. This linear chain can be easily expanded and/or contracted, and changes in the assembly sequence can be quickly achieved by exchanging or regrouping the station inserts.
