Abstracts

A linear motor is an electric motor that has had its stator and rotor 'unrolled' so that instead of producing a torque (rotation) it produces a linear force along its length. However, linear motors are not necessarily straight. Characteristically, a linear motor's active section has ends, whereas more conventional motors are arranged as a continuous loop.

The Linear Motor industry can be broken down into several segments, Cylindrical Type, U-Shaped Slot Type, etc.

Across the world, the major players cover Parker, Beckhoff Automation, etc.
