Abstracts

Linen fabric refers to the textile derived from flax plant fibers used for products such as bedsheets, towels, bedsheets, and table clothes. Since a decade, there has been a phenomenal growth in the usage of linen clothes, which include shirts, trousers, blazers, and similar others. The fabric is considered to be more lustrous, comfortable, and durable compared to cotton. Moreover, linen fibers are less affected by heat and sun, compared to other fabrics.

Excessive comfort offered by linen clothes owing to their property to absorb and quickly remove perspiration is amongst primary factors that drive the linen apparel market. Moreover, linen apparels are perceived as high-quality, premium clothes and thus worn as lifestyle clothing. High cost of linen products, compared to other fabrics and lack of elasticity in the linen fabric (leading to breakage of threads on folding/creasing at same place) restrain the market growth.

Linen fabric market is segmented, based on usage, namely as clothing, bed linen, towels, and others. Based on distribution channel, the market is segregated as specialty stores, large & small retail stores, and others. The market is analyzed based on regions, which include North America, Europe, APAC, and LAMEA. Europe was the largest market for linen fabric in 2015; however, China is expected to witness rapid growth during the forecast period.
