Abstracts

A liquid ring pump is a rotating positive-displacement pump where they are used as a vacuum pump and gas compressor. It is a unique class of pumps that is non-pulsating and primarily designed to remove gases. Impellers are located eccentrically and aids in creating a ring of liquid and to maintain it at the periphery of the pump. Unlike other vacuum pumps, liquid ring vacuum pumps require lower maintenance and come with longer warranties. These pumps are available in a wide range of suction capacity and find applications in various industries such as chemical processing, oil & gas, paper & pulp, power, and other processing industries.
