## Abstracts

Generally as waste liquid treatment, activated sludge method, water treatment and incineration method can be adopted. When Waste water is not possible to be treated by activated sludge and water treatment method as COD or BOD value is too high for this two ways, the incineration method shall be adopted. Liquid waste disposal systems are very similar to gas cleaning systems by recuperative thermal oxidation. They are based on introducing the liquids in an oxidation chamber where the gases are at a minimum temperature of 850 °C. Under these conditions, the liquid evaporates and the organic compounds ignite, turning into carbon dioxide and water.
