Abstracts

There are many kinds of additives for lithium battery electrolyte, which account for a small proportion of mass in the electrolyte and have a high unit value, which can optimize various properties of the electrolyte, such as electrical conductivity, flame retardant performance, overcharge protection, rate performance, etc. Based on the different characteristics of various types of batteries and the continuous pursuit of energy, power, cycle, safety and other performances of batteries, the importance of additives is particularly prominent. It can even be said that the research and development and application of additives will become the core competitiveness of electrolyte enterprises. The use of electrolyte additives is a low-cost and high-efficiency method to improve battery cycle life and safety, and a small amount of additives can improve the effect.
