Abstracts

Liver function tests (LFT) are blood tests that are used to assess the state of liver and biliary system. The liver processes and filters the blood as it circulates through the body. It performs many vital functions that include preparing blood clotting proteins, metabolism of nutrients, and detoxification of harmful substances. The cells in the liver contain enzymes that are responsible for carrying out the chemical reactions. When liver cells are damaged or get destroyed the enzymes in the cells leak out into the blood, where they can be analyzed by performing liver function tests.
