Abstracts

For many decades, the LMS (learning management system) has dominated the learning technology space. However, a new learning platform called the LXP recently emerged to challenge it. This new contender has shook up the industry by finding its own niche within the learning systems market..The primary drivers for an organisation to invest in elearning (and a learning management system to, well, manage it) are essential knowledge / skills development and regulatory compliance. This is about training that needs to get done and the LMS simply helps the L&D department to roll it out, track progress / completion, and analyse the success of the content and individuals or groups of learners. An LXP is more about creating and nurturing a culture of learning within an organisation.
