Load balancing software solution distributes load of work among various servers through software-defined networks and virtual network resources. The load balancing software augments load balancing capability and provides high availability with scalable work force distribution. Through various deployment modes such as cloud and on-premise deployment, various industry players including IBM Corporation, KEMP Technologies, Inc., Google Inc., and others are offering efficient load balancing software in the global market.

The global load balancing software market is expected to register substantial growth in the near future, attributed to rise in ICT spending by governments in several developed as well as developing regions including North America, Europe, and Asia-Pacific. In addition, rise in concerns over data loss, recovery, and server load management give rise to the load balancing software industry among several user groups such as large and small and medium enterprises. However, security concerns over cloud load balancing is expected to restrain the growth of the market.
