A boiler is an equipment designed to transfer heat to a fluid (water, natural gas, oil, etc.) until it is suitable for use. On the basis of pressure, there are two types of boilers, namely high pressure and low-pressure boilers and the major difference between the two is the amount of pressure per square inch or pounds per square inch gauge that the boiler produces. A low-pressure boiler exerts a maximum pressure of 160 pounds per square inch for water and 15 pounds per square inch for steam.
