## Abstracts

In the world of pressure measurement technology, distinction is made between various pressure types, which differ from one another in terms of their reference point (reference pressure). Absolute pressure, relative pressure, sealed pressure and differential pressure are all pressure types. Sealed pressure sensor combines the measuring principle of relative pressure with the benefits of a sealed sensor element. This pressure type is particularly useful in harsh working environments where ventilation of the measuring cell cannot be relied upon. Sealed pressure relates to a pre-defined reference pressure. The pressure range of low pressure sealed sensors below 5 Mpa.
