LTE (long term evolution) advanced is a mobile communication standard and a key enhancement in long term evolution. Current LTE technology offers internet speed of up to 150Mbps (mega-bytes per second), whereas LTE advanced is capable of offering internet speed of 300 Mbps. 5G is a 5th generation wireless system which denotes the advanced phase of mobile telecommunication standards, ahead of the current IMT (international mobile telecommunications) advanced or 4G standards. 5G can offer internet speed between 10 Gbps (giga-bytes per second) to 100 Gbps. In addition, 5G provides ultra low latency range between 1ms and 10ms, while 4G technology can offer low latency range between 40ms and 60ms. With ultra low latency range end-users can watch live stream of sports matches over internet. Rising demand for high internet speed to get real time response is one of the major factors driving the development of latest technologies such as LTE advanced and 5G.
