Abstracts

A magnetic bearing is a bearing that supports a load using magnetic levitation. Magnetic bearings support moving parts without physical contact. For instance, they are able to levitate a rotating shaft and permit relative motion with very low friction and no mechanical wear. Magnetic bearings support the highest speeds of all kinds of bearing and have no maximum relative speed.

Magnetic bearing technology is becoming more and more important as an alternative to conventional bearing supports, and is used when the technical requirements can no longer be fulfilled by other bearing types. This especially applies to industrial machinery with very high rotational speeds and shaft weights of up to several tons.
