Magnetic fluid: also called magnetic fluid, magnetic fluid. Magnetic fluid is a new type of functional material, which is a magnetic conductive material in the form of liquid. It is a stable liquid formed by uniformly dispersing magnetic conductive solid particles with a diameter of 10 nanometers into the base carrier liquid. It has both liquid fluidity and good magnetic permeability. Magnetic fluid seals are seals that use magnetic fluid and have the property of being attracted by magnets. Unlike traditional oil seals and mechanical seals, magnetic fluid seals are seals that maintain clean sealing performance by fixing magnetic fluid around the rotating shaft with magnets to make a fluid O-ring.
